Education

University of Minnesota – Twin Cities

Sep 2024 – Present

Honors Undergraduate Double Major in Computer Science & Data Science

GPA: 3.813/4.0

Minor in Statistics

- **Academic Awards:** Dean's List for the **Fall 2024, Spring 2025 and Spring 2026** academic terms, awarded a **\$15,000** per year scholarship at UMN.
- **Thesis:** Currently conducting research on **'Personalization v/s. Consistency in AI'** and will be writing my honors thesis on the same.

Technical Proficiency

Languages: C, C++, Java, Python, JavaScript, HTML, CSS, OCaml, MATLAB, MySQL, Pytorch, Pandas
Tools & Frameworks: Git, WindSurf, Bolt.new, GenSpark, Canva, NotebookLM, Microsoft Office
Hardware Systems: Microcontrollers, Microprocessors (PICOLO), Embedded Sensors, CAD, 3D Printing
AI Integration: Claude Code, GitHub Copilot, Roo Code implemented with VS Code.

Professional Experience

Handshake AI Fellowship

Remote

Advanced AI Engineering Fellow (Projects: Ivy, Pacemaker, Hertz)

June 2026 – Present

- **Prompt Writing & Testing:** Designed **20+ complex** programming prompts and logical constraints to evaluate how effectively frontier LLMs handle technical problems.
- **Model Benchmarking:** Evaluated coding outputs from competing LLMs side-by-side to judge code accuracy, algorithmic efficiency, and structural reasoning steps.
- **RLHF Training Data:** Wrote detailed technical justifications and performance scores to grade AI answers, **providing human-in-the-loop data** used to optimize the models.
- **Error Analysis:** Flagged logical flaws, syntax mistakes, and hallucinations within model answers to improve correctness and safety.

Stealth Startup:

Remote

Software Engineering Intern

May 2026 – August 2026

- **Feature Engineering:** Tasked with designing, implementing, and unit testing scalable user features for enterprise-grade, cloud-hosted corporate banking applications, with the assistance of **Claude Code and a team of RAG models**.
- **API Integration:** Secure backend microservices engineered to support frictionless user lifecycle management and real-time engagement workflows. Also, in charge of building the US/Canada logic for the app, adapting from the India/UAE based logic.
- **Product Architecture:** Drive core business logic across high-impact FinTech modules, including the Accountable tracker, digital On-boarding funnels, system Assembly, and automated VAT/GST Engines based on location.
- **Git Collaboration:** Partner in technical design reviews, cross-functional code sweeps, and strict Git rituals to maintain clean documentation and scalable baseline code architecture.

DailyWithDoc & Becca:

Remote

Software Engineering and Marketing Intern

January 2026 – May 2026

- **AI Research:** Conducted deep AI research utilizing NotebookLM and contributed to **SEO optimization** planning to better digital strategy and audience reach.
- **Frontend Development:** Developed landing pages using modern tools including Bolt.new, Genspark, and Windsurf, while designing social media using Canva.
- **Team Leadership:** Served as a core code squad leader, driving team initiatives, collaborating seamlessly, and exceeding standard peer performance.

Technical Project Experience

(more on my portfolio)

Near-Space Research Ballooning Payload System

Extracurricular UMN Project

- **Aerospace Systems Engineering:** Developed an atmospheric research payload deployed to an altitude of 90,000 feet to evaluate the mechanical and spatial reading efficiency profiles of an **RM-80 Geiger** counter.
- **Firmware Architecture:** Programmed multi-core embedded C firmware on a **PICOLO** microcontroller to execute automated 60-second structural rotations while multiplexing continuous sensor data.
- **Data Wrangling & Analytics:** Extracted, normalized, and analyzed **over 10,000** rows of sub-second telemetry and multi-axis radiation logs gathered throughout the **3+ hour flight**.

Spotify Sorter Extension & Web API Engine

Personal Project

- **Secure Interface Design:** Architected a web API-driven browser extension using Java and JavaScript that utilizes secure OAuth protocols to safely access granular user metadata - that has proven credible and useful on playlists with **1000+ songs**.
- **Data Sorting Pipelines:** Programmed algorithmic filters that sort and isolate specific artists from large collaborative playlists, instantly structuring targeted, clean sub-playlists.

Extracurricular Leadership & Engagement

- **Club Leadership:** Formulate strategies and steer programming as an active Executive Board Member across the AWS Cloud Club, Honors Multicultural Network (HMN), Datanexus, Hindu Student Association (HSA), South Indian Student Association (SISA) and the Society of Optics and Photonics (SOP)
- **Collegiate Representation:** Selected to represent the University of Minnesota at the Midwest Regional Championship and the National Collegiate Cricket League; active player for the UMN Cricket Club.
- **Community:** Mentored underprivileged students and coordinated community education resource allocation, for these kids, through on-the-ground volunteer work with the Panchajanya Foundation and Abhyudaya.
- **Languages:** (Native/Fluent) English, Kannada, Hindi; (Beginner) Spanish, Sanskrit
